TRAINING SESSIONS

1. Purpose and Scope

The SEE Padel app gets a Training Session flow built on three screens: Session Setup, Live Session and Training Results. The player picks the shots he wants to drill, trains while the app tracks him, then reviews his shot stats in his profile.

1. **In version 1.** Shot type, shot count or Basket mode, the Shot Cart sequence with reorder and delete, Redo, End and Training Results.
2. **In a later version.** Court target selection on a court map (section 7).

2. Flow Overview

3. Screen 1: Session Setup

A pop up that opens when the player taps Start Training. He defines his first drill, then starts.

Element	Type	Behaviour
Shot type	Selector	Player picks one shot from the shot library (section 6)
Shot count	Stepper with plus and minus	Sets a fixed number of shots, e.g. 10 lobs
Basket mode	Toggle, replaces the count	Drill runs until the basket of balls is finished
Start	Primary button	Locks the selection and opens Screen 2

4. Screen 2: Live Session

A control window pops up once play begins. It holds three actions only.

1. **Redo.** Repeat the same drill from the start, e.g. the same 10 lobs.
2. **Train Another Shot.** Opens the Shot Cart, where the player builds a sequence of drills.
3. **End.** Closes the session and opens Screen 3.

Shot Cart. Works like a shopping cart: the player adds shots, sets each amount, and can reorder or delete any item before starting.

Action	Behaviour
Add shot	Pick a shot type from the library and add it to the cart
Set amount	Plus and minus for a fixed count, or Basket mode
Reorder	Move any shot up or down; shots play in cart order
Delete	Remove any shot from the cart
Start	Runs the cart in order and returns to Live Session

> *Example cart: Lob × 10, then Bandeja × 10, then Víbora on Basket mode.*

5. Screen 3: Training Results

Shown after End and saved to a Training section in the player profile, so every past session stays viewable.

Component	What it shows
Shot placement heat map	Where on the court the player's shots landed
Shot counter	Total shots played in the session
Shot frequency	Number of each shot type played, matching the shots selected in setup and in the cart

6. Padel Shot Library

Every shot type available in the Session Setup selector and the Shot Cart, grouped by category for the picker.

Category	Shots
Serve and return	Serve, Return of serve
Groundstrokes	Forehand drive, Backhand drive
Volleys	Forehand volley, Backhand volley, Drop volley
Overheads	Bandeja, Víbora, Flat smash, Topspin smash (Rulo), Por tres (x3 smash), Por cuatro (x4 smash), Gancho, Cuchilla
Defensive and touch	Lob (Globo), Chiquita, Drop shot (Dejada)
Wall shots	Back wall exit forehand, Back wall exit backhand, Side wall exit, Double wall exit (Doble pared), Contrapared, Bajada

7. Future Scope

1. **Court target selection.** On Session Setup, the player taps a target zone on a court map for each shot, e.g. where his lobs should land. Planned first for assessments.
